

What happened to the Timucua? Activity

ANSWERS

They are different because the Timucua hut is circular while the Seminole chickee is rectangular. The Timucua hut has solid walls, while the Seminole chickee has open walls. Also, the Seminole hut has a raised floor, while the Timucua hut has a dirt floor.

They are similar because they are both made of wood and palm leaves. Neither of them has windows, doors, air conditioning or toilets.

Remember that most Seminole people today live in modern homes – just like yours!
