

Brown Recluse Spider

Coloring Instructions: Color the fiddle-shaped mark on the spider's head dark brown. Its abdomen (back body part) is also dark brown. The rest of this spider is light brown.

Interesting Fact: This spider's bite is dangerous because it causes the skin and muscle around the bite area to die. It may cause a large sore that takes months to heal and leaves a scar. Brown recluse spiders are rarely seen outdoors. Instead, they live in garages, closets, and other protected areas.
