

Southern Flounder

Coloring Instructions: Color the spots on the Southern Flounder very light brown. The rest of the fish's body is very dark brown, matching the bottom it rests on. Flounders that live in areas with light-colored soils will be lighter than those living in areas with dark-colored soils.

Interesting Fact: Flounders have very flat bodies with both eyes on one side of the head. This allows the fish to lie on the ocean bottom and look up with both eyes.
