

Manatee

Coloring Instructions: Color the entire manatee gray. Color the rectangular and circular outlines on the manatee sign bright orange.

Interesting Fact: Manatees are aquatic mammals. They eat plants and grasses that grow in shallow water or float on the surface. When their front teeth wear down from chewing so many plants, the old teeth fall out and new ones grow in from the back. The fact that manatees have toenails suggests that they once lived on land and had walking legs. At some point, they moved into the water to live permanently. Today, many manatees are injured or killed by boats. Always obey boating speed limits to help protect these animals.
