

# Pompano

**Coloring Instructions:** Color the eye, the throat, the belly, the lower fins, and the end of the Pompano's tail yellow. Color the other fins dark gray. The top of the pompano's back should be greenish gray. Next, color dark gray or silver down to the middle line. Below that, color the remaining space light gray or silver.

**Interesting Fact:** Pompano prefer to live close to the beach where the waves crash and stir up small shell animals for them to eat. Sometimes these fish will jump above the surface of the water and slap across the wave tops, like a stone skipping across the surface of a pond.
