

# Florida Snapping Turtle

**Coloring Instructions** - Color its toenails and the spikes on its tail and legs dark brown. Color its chin and the bottom edge of its shell yellow. Color its legs, head, and tail greenish brown. Its shell should be greenish-black.

**Interesting Fact:** Snapping turtles prefer to rest in warm shallow water, partly buried in the mud. Only their eyes and nose show above the water. They eat worms, water plants, fish, birds, mice, and dead animals. They have very powerful jaws and can inflict a very dangerous bite when bothered.
