

# Water Moccasin

**Coloring Instructions:** Color stripe above the eye yellow. The water moccasin's cheeks and chin are also yellow. The inside of the snake's mouth should be white. Color the rest of the snake black.

**Interesting Fact:** The Water Moccasin is also called a "Cottonmouth" because it sometimes shows the white insides of its mouth when frightened. These snakes are venomous! The water moccasin swims with its whole head (not just its nose) sticking above the surface of the water.
