

# Yellow Jacket Wasp

**Coloring Instructions:** Color the wasp's antennae black and its legs yellow. Its wings should be a clear yellow. Its body is covered with black and yellow patterns.

**Interesting Fact:** These wasps often steal bits of food from picnics. The females can sting many times, even if you are not bothering them. They build nests in the ground or in old stumps. If you ever see yellow jackets flying out of a nest, leave the area immediately. They will sting aggressively to protect their nest area.
